Abstract

Using Federal Open Market Committee (FOMC) transcripts from 1960 to 2010, this paper examines the evolution of the Committee's approach to the inflation-unemployment tradeoff. We find: (1) FOMC discussions have increasingly emphasized inflation relative to unemployment and (2) this shift occurred during the Volcker era and has continued even as inflation itself declined, with the result that the emphasis on inflation has become entrenched and disconnected from actual inflation. Finally, we create an expanded Taylor Rule that includes these FOMC discussions and find that the increased emphasis on inflation is positively correlated with the federal funds rate. I. INTRODUCTION

Since the early post-war period, the Federal Reserve (the Fed) has had the dual mandate of “price stability” and “maximum employment,” which was reaffirmed with the 1977 Federal Reform Act and the 1978 Full Employment and Balanced Growth Act (Humphrey-Hawkins Full Employment Act). And yet, beginning with Phillips (1958), macroeconomics has debated the degree to which there is a tradeoff between inflation and unemployment (e.g., Blanchard 2016; Blanchard and Galí 2007; Friedman 1968; Lucas 1972; Phelps 1967; Samuelson and Solow 1960). How has the Fed approached the issue of a tradeoff between inflation and unemployment? Has its approach changed over time? These questions are of significance for policymaking and for understanding the relationship between academic debates and policy. While many previous studies have used the Federal Open Market Committee (FOMC) transcripts, a systematic analysis of the tradeoff in FOMC deliberations is still lacking.¹

Through semi-automated content analysis, we examine the frequency with which the FOMC members discuss inflation versus unemployment over both the pre- and post-Volcker eras
