Contents

Preface	xv
Why a Book on Environmental Contaminants	xv
Structure and Emphasis	xvii
Strengths and Weaknesses, Realities and Perceptions, Myths and History	xviii
Issues in Environmental Science: Real versus Junk Science	xix
Prologue: The Challenge	xxv
Acknowledgments	xxxii
Author's Note on Discussion Boxes, Equations, and Concentration Units	xxxv
Part I: An Environmental Policy Primer	1
1. Scientific and Engineering Perspectives of Environmental Contaminants	3
The Evolution and Progress of Environmental Science and Engineering	3
What Is a Contaminant?	5
Environmental Manager's Journal Entry: Beneficial Use in the Great Lakes	6
Understanding Policy by Understanding Science	11
Connections and Interrelationships of Environmental Science	13
Environmental Assessment and Intervention	22
Engineering Technical Note: Cleaning up a Hazardous Waste Site	26
Social Aspects of Environmental Science	30
Introduction to Environmental Policy	31
The National Environmental Policy Act	32
Issues in Environmental Science: Confessions of an EIS Preparer	36
Clean Air Legislation	39
	vii

Issues in Environmental Science: Evolution of Environmental Indicators for Air and Water	40
Urban Air Pollution	43
Mobile Sources	43
Toxic Air Pollutants	46
Acid Deposition	47
Environmental Field Log Entry: Discussion: Normal Rain Is "Acid Rain"	47
Protecting the Ozone Layer	50
Environmental Field Log Entry: Ozone—Location, Location, Location	50
Water Quality Legislation	53
Drinking Water	53
Water Pollution Abatement	53
Solid and Hazardous Wastes Laws	54
Management of Active Hazardous Waste Facilities	54
Addressing Abandoned Hazardous Wastes	55
Environmental Product and Consumer Protection Laws	56
Notes and Commentary	59
Part II: Fundamentals of Environmental Science and Engineering	63
Introduction to Part II	65
Importance of Physics in Environmental Contamination and Risk	67
Importance of Chemistry in Environmental Contamination and Risk	70
Importance of Biology in Environmental Contamination and Risk	71
Beyond Basic Science	71
2. Fundamentals of Environmental Physics	73
Principles and Concepts of Energy and Matter Important to the Environment	73
Mass and Work	74
Environmental Mechanics	80
Environmental Determinate Statics: A Review of the Basic Physics	81
Environmental Dynamics	89
Notes and Commentary	90
3. Applied Contaminant Physics: Fluid Properties	93
Physical Properties of Environmental Fluids	93
Velocity	97
Discharge and Flow	99
Pressure	103
Acceleration	107

Displacement, Velocity, and Acceleration	108
Engineer's Notebook Entry: Stationary Points in a Fluid	109
Density	110
Engineer's Notebook Entry: Units in Handbooks and Reference Manuals	112
Engineering Technical Note: Density as a Factor in Emergency Response	114
Specific Gravity	118
Engineer's Notebook Entry: Fluid Properties	119
Engineer's Notebook Entry: Viscosity	126
Notes and Commentary	137
4. Environmental Equilibrium, Partitioning, and Balances	141
Fundamentals of Environmental Equilibria	141
Solubility as a Physical and Chemical Phenomenon	149
Polarity	150
Intramolecular Bonds, Intermolecular Forces, and Molecular Dipole Moments	154
Fluid Solubility/Density Relationships	156
Environmental Thermodynamics	162
Fluid Volatility/Solubility/Density Relationships	164
Lab Notebook Entry: Partitioning in the Laboratory	169
Environmental Balances	172
Technical Note: Control Volumes for Environmental Contamination	174
The Environmental Mass Balance Reaction Term	176
Notes and Commentary	182
5. Movement of Contaminants in the Environment	185
Environmental Chemodynamics Models	186
Partitioning to Solids: Sorption	190
Partitioning to the Liquid Phase: Dissolution	195
Partitioning to the Gas Phase: Volatilization	197
Engineering Technical Note: Phase Distributions within the Air Compartment—Atmospheric Measurements of the World Trade Center Plume	203
Phase Partitioning Used to Identify Sources of Pollution	214
Partitioning to Organic Tissue	218
Concentration-Based and Fugacity-Based Transport Models	220
Kinetics versus Equilibrium	240
Selecting Units of Mass and Concentrations in Chemodynamics	244
Fugacity, Z Values, and Henry's Law	252
How Contaminants Move in the Environment	263
Advection	264
Dispersion	269
Diffusion	272

Overall Effect of the Fluxes, Sinks, and Sources	275
Combining Transport and Degradation Processes Using Half-Lives and Rate Constants	276
Notes and Commentary	283
6. Fundamentals of Environmental Chemistry	289
Basic Concepts of Environmental Chemistry	296
Foundations	296
Engineering Technical Note: Source Apportionment, Receptor Models, and Carbon Dating	299
Expressions of Chemical Characteristics	303
The Periodic Table	305
Electromagnetic Radiation, Electron Density, Orbitals, and Valence	306
Field Manual Entry: Physical Contaminants— Electromagnetic Radiation	307
Lab Notebook Entry: Importance of Valence State in Arsenic Contamination and Treatment	316
Organic Chemistry	321
Isomers	331
Notes and Commentary	332
7. Chemical Reactions in the Environment	333
Engineer's Technical Note: Formation of Dioxins and Furans	335
Environmental Ionic Reactions	340
Salts and Solutions	340
Ecologist's Field Manual Entry: Anions in the Nitrogen Biogeochemical Cycle	341
Solubility and Electrolytes	343
Environmental Acid and Base Chemistry	348
Hydrolysis	356
Photolysis	358
Precipitation Reactions in Environmental Engineering	358
Engineer's Technical Note: Case Study—Acidic Metal Contamination	362
Oxidation-Reduction Reactions	367
Biological Redox Reactions	369
Environmental Metal Chemistry	380
Engineer's Technical Note: Oxidation-Reduction Reactions Applied to Environmental Probes	382
Notes and Commentary	385
8. Biological Principles of Environmental Contamination	389
The Cell	389
The "Bio" Terms	392

Bio-Uptake and Bioaccumulation	393
Engineering Technical Note: Removing Endocrine Disruptors from Drinking Water—An Alternative Treatment Scheme Using Ultraviolet Light	403
Oxygen-Depleting Contaminants	416
Biomarkers of Contaminants	418
Laboratory Notebook Entry: Measuring and Assessing a Biological Agent— <i>Stachybotrys</i>	419
Accelerated Biodegradation: Bioremediation	424
Biocriteria: A New Way to Determine Environmental Quality	425
Notes and Commentary	428
Part III: Contaminant Risk	433
9. Contaminant Hazards	435
Environmental Toxicology	435
Toxicity Testing	438
Hazardous Waste Characteristics	441
Bio-Effective Dose	445
Toxicokinetics and Toxicodynamics	447
Environmental Epidemiology	456
Contaminant Groupings	460
Carcinogens	463
Cancer Classifications	463
The Slope Factor	465
Slope Factors for Cancer	465
Chronic Noncancer Health Endpoints	474
Reference Dose and Reference Concentrations: "Safe"	
Levels of Exposure	474
Environmental Endocrine Disruptors	478
The Endocrine System	478
Types of Environmental Endocrine Disruptors	481
Studying Endocrine Disruptors	482
Neurotoxins	485
Mercury: The Neurotoxin	486
Immunotoxins	487
Ecological Toxicity	488
Notes and Commentary	492
10. Contaminant Exposure and Risk Calculations	499
Exposure Assessment	499
Calculating Exposures	501
The Lifetime Average Daily Dose (LADD)	502
Calculating Risk	510
Applying Cancer Risk Calculations to Cleanup Levels	511

Non-Cancer Hazard and Risk Calculations	516
The Hazard Quotient	519
The Hazard Index	519
Comprehensive Risk Communication	521
Notes and Commentary	528
Part IV: Interventions to Address Environmental Contamination	531
11. Contaminant Sampling and Analysis	533
Environmental Monitoring	533
Sampling Approaches	536
Laboratory Analysis	541
Sources of Uncertainty	547
Quality in Environmental Science: Precision and Accuracy	552
Certainty in Reporting Environmental Data: Significant Figures	553
Expressions of Data Accuracy	559
Ecologist's Field Manual: Importance of Chlorophyll as an Environmental Indicator	561
Chemiluminescence and Fluorescent In-Situ Hybridization (FISH): Monitoring Environmental Contamination	566
Example Measurement and Monitoring Problem: Contaminated Soil	567
Chemiluminescence for Sensing of the Levels of Nitric Oxide (NO) Emissions from Soil	567
Using FISH to Analyze Soil Microbial Communities Exposed to Different Soil Contaminants and Different Levels of Contamination	569
Integration of Monitoring Techniques: Chemiluminescence and Fluorescent In-Situ Hybridization (FISH)	570
Notes and Commentary	571
12. Intervention: Managing the Risks of Environmental Contamination	575
A Template for Cleaning Up Contaminants	575
Characterizing Contaminants in the Environment	577
Estimating Contaminant Migration	580
Treatability Tests	582
Contaminant Treatment and Control Approaches	582
Intervention at the Source of Contamination	584
Intervention at the Point of Release	585
Intervention as the Contaminant Is Transported in the Environment	586

Intervention to Control the Exposure	586
Intervention at the Point of Response	587
Thermal Processing: The Science, Engineering and Technology of Contaminant Destruction	587
Rotary Kiln	591
Multiple Hearth	592
Liquid Injection	594
Fluidized Bed	595
Multiple Chamber	596
Calculating Destruction Removal Efficiency	596
Destruction Efficiency Example	597
Other Thermal Processes	597
Emerging Thermal Technologies	599
Microbiological Processing: The Science, Engineering, and Technology of Contaminant Biotreatment	600
Trickling Filter	603
Activated Sludge	603
Anaerobic Treatment	607
Aeration Ponds	610
Hazardous Waste Storage Landfills: Examples of the Science, Engineering, and Technology of Long-Term Storage of Contaminated Media	610
Siting	611
Design	613
Operation	616
Post-Closure Management	617
<i>Ex Situ</i> and <i>In Situ</i> Treatment	617
Notes and Commentary	627
13. Environmental Decisions and Professionalism	631
Communicating Scientific Information	633
Factor 1: What Is the Possibility of a Severely Negative or Catastrophic Outcome?	633
Factor 2: How Familiar Are the Situation and the Potential Risks?	634
Factor 3: Can the Processes and Mechanisms Being Proposed or Undertaken Be Explained?	635
Factor 4: How Certain Is the Science and Engineering?	635
Factor 5: How Much Personal Control Do They Have Over Exposure and Risk?	636
Factor 6: Is the Exposure Voluntary or Involuntary?	636
Factor 7: Are Children or Other Sensitive Subpopulations at Risk?	636
Factor 8: When Are the Effects Likely to Occur?	637

Factor 9: Are Future Generations at Risk?	637
Factor 10: Are Potential Victims Readably Identifiable?	637
Factor 11: How Much Do People Dread the Outcome?	638
Factor 12: Do People Trust the Institution Responsible for Assessing the Risk and Managing the Cleanup?	638
Factor 13: What Is the Media Saying?	638
Factor 14: What Is the Accident History of This Site or Facility, or of Similar Sites or Facilities?	639
Factor 15: Is the Risk Distributed Equitably?	639
Factor 16: Are the Benefits Clear?	639
Factor 17: If There Is Any Failure, Will It Be Reversible?	640
Factor 18: What Is the Stake of Each Person?	640
Factor 19: What Is the Origin of the Problem?	640
Environmental Information Management	641
Notes and Commentary	651
14. Epilogue: Benzene Metabolism Revisited	653
The Sensitivity Analysis: An Important Step Beyond Stoichiometry	654
Interdependencies between a Contaminant and a Substrate	660
Notes and Commentary	666
Glossary of Environmental Sciences and Engineering Terminology	669
Appendix 1. Information Needed to Prepare Environmental Impact Statements	715
Appendix 2. Safe Drinking Water Act Contaminants and Maximum Contaminant Levels	725
Appendix 3. Toxic Compounds Listed in the 1990 Clean Air Act Amendments	747
Appendix 4. Physical Constants	753
Appendix 5. Universal Constants	757
Appendix 6. Constants Frequently Applied in the Physical Sciences	759
Appendix 7. Periodic Table of Elements	761
Appendix 8. Minimum Risk Levels for Chemicals	763
Appendix 9. Physical Contaminants	775
Index	789
